

### **Custom Antibody Production – Rabbit M108**

This protocol (based on two rabbits) yields approximately 100-150 ml antisera. This service includes four immunizations, one pre-bleed, three production bleeds, set up, and termination. The antigen requirement: is 1.8 mg per animal. If you would like to continue the project, we do have per diem charges.

Please call for current pricing schedule. We can accommodate bulk projects if required and can provide associated discounts. Customers will be billed for shipping and handling charges.

The protocol is as follows:

Day 0	Pre-Bleed
Day 1	Primary Subcutaneous Injection using a dose of 200ug with Complete Frauds Adjuvant.
Day 21	First Boost Subcutaneous Injection using a dose of 200ug with Incomplete Frauds Adjuvant.
Day 35	Second Boost Subcutaneous Injection using a dose of 200ug with Incomplete Frauds Adjuvant.
Day 44-45	First Bleed yielding approximately 30-50mls of Serum
Day 49	Third Boost Subcutaneous Injection using a dose of 200ug with Incomplete Frauds Adjuvant.
Day 58-59	Second Bleed yielding approximately 30-50mls of Serum
Day 63	Third Bleed yielding approximately 30-50mls of Serum
Day 67	Ship Serum
Day 68-77	Extend or Terminate Project
